ELSEVIER

Journal of Materials Processing Technology 91 (1999) 283–286

Journal of Materials Processing Technology

Subject Index of Volume 91

Abrasive jet
an experimental study on the abrasive jet deburring of cross-drilled holes, 178
ABS material
numerical simulation of acrylonitrile-butadiene-styrene material's vacuum forming process, 219
Acoustic emission
using neural networks to model the blanking process, 52
Adaptive mesh refinement
an adaptive mesh h-refinement algorithm for the finite-element modeling of sheet forming, 183
Adhesive joints
study on the microwave curing of adhesive joints using a temperature-controlled feedback system, 128
Air back pressure
modeling of air back pressure in die-casting dies, 264
Aluminium
the effect of cold rolling on the dynamic mechanical responses of SiCp/Al composites, 215
Aluminum matrix composites
cutting process and chip appearance of aluminum matrix composites reinforced by SiC particle, 231
Amorphous alloys
study on the thermal stability of Cu–P based amorphous alloy systems, 90
Analytical model
surface generation mechanism in helical scan grinding: an analytical study, 206
ANSYS
computer simulation of pipe-bending processes with small bending radius using local induction heating, 75
Aqueous solution
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
Arc welding
estimation of residual stresses in weldments using a nine-noded degenerated shell element, 150
Assumed strain field technique
estimation of residual stresses in weldments using a nine-noded degenerated shell element, 150

Bending
theoretical analysis of springback in bending of integrated circuit leadframes, 111
Blanking
using neural networks to model the blanking process, 52
Brittle and ductile materials
helical scan grinding of brittle and ductile materials, 196

Chips
cutting process and chip appearance of aluminum matrix composites reinforced by SiC particle, 231
Classical theory of phase transformation
study on the thermal stability of Cu–P based amorphous alloy systems, 90
Cold forging
development of a parametric computer-aided die design system for cold forging, 80
Cold rolling
the effect of cold rolling on the dynamic mechanical responses of SiCp/Al composites, 215
Composite
effects of pressure and temperature on the melt density and the melt flow rate of LDEP and glass bead-filled LDPE composite, 167
Composites
investigations into the effect of geometry of a trepanning tool on thrust and torque during drilling of GFRP composites, 1
Computer aided design and manufacture
application of a manufacturing model for the optimization of additive processing of Inconel alloy 690, 18
Computer simulation
a simplified approach for the simulation of metal flow in a cylindrical sleeve diecasting cavity, 116
computer simulation of pipe-bending processes with small bending radius using local induction heating, 75
developments in hydroforming, 236
Conventional spinning
study on the deformation mode of conventional spinning of plates, 226
Cooling rate
effect of laser surface hardening on En18 (AISI 5135) steel, 29
Correlation
using neural networks to model the blanking process, 52
Cross-drilled holes
an experimental study on the abrasive jet deburring of cross-drilled holes, 178
Cross-shaft
3D FEM simulation of multi-stage forging process using solid modeling of forging tools, 191
Cu–P based alloy systems
study on the thermal stability of Cu–P based amorphous alloy systems, 90
Cutting
cutting process and chip appearance of aluminum matrix composites reinforced by SiC particle, 231

Damage-based criterion
development of a damage-based criterion for ductile fracture prediction in sheet metal forming, 270
Data acquisition
using neural networks to model the blanking process, 52
Deburring
an experimental study on the abrasive jet deburring of cross-drilled holes, 178

Elsevier Science S.A.
PII: S0924-0136(99)00331-3

Deformation mechanism
study on the deformation mode of conventional spinning of plates, 226
Degenerated shell element
estimation of residual stresses in weldments using a nine-noded degenerated shell element, 150
Design for manufacturing
design for manufacturing: a dimensioning aspect, 121
Detection of grinding burn
in-process monitoring of grinding burn in the cylindrical grinding of steel, 37
Die casting
a simplified approach for the simulation of metal flow in a cylindrical sleeve diecasting cavity, 116
Die-casting
modeling of air back pressure in die-casting dies, 264
Die design
development of a parametric computer-aided die design system for cold forging, 80
Digital signal process (DSP)
using neural networks to model the blanking process, 52
Dimensioning
design for manufacturing: a dimensioning aspect, 121
Direct current
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
Directed light fabrication
application of a manufacturing model for the optimization of additive processing of Inconel alloy 690, 18
DMA
the effect of cold rolling on the dynamic mechanical responses of SiCp/Al composites, 215
Drilling
investigations into the effect of geometry of a trepanning tool on thrust and torque during drilling of GFRP composites, 1
Ductile fracture prediction
development of a damage-based criterion for ductile fracture prediction in sheet metal forming, 270

Elasto–plastic analysis
estimation of residual stresses in weldments using a nine-noded degenerated shell element, 150
Electrode wear rate (EWR)
micro slit machining using electro-discharge machining with a modified rotary disk electrode (RDE), 161
Electrolysis
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
Electrolytic surface-hardening
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
Enhanced assumed strain finite-element method
simulation of the sheet metal extrusion process by the enhanced assumed strain finite element method, 250
Expansion
micro slit machining using electro-discharge machining with a modified rotary disk electrode (RDE), 161
Extrusion
a numerical application of the upper-bound technique for round-to-hexagon extrusion through linearly converging dies, 105

Feature extraction
using neural networks to model the blanking process, 52
FEM simulation
numerical simulation of acrylonitrile-butadiene-styrene material's vacuum forming process, 219
Ferritic stainless steel
the effect of niobium and homogenization on the wear resistance and some mechanical properties of ferritic stainless steel containing 17–18 wt.% chromium, 172
Fibre reinforced plastics
investigations into the effect of geometry of a trepanning tool on thrust and torque during drilling of GFRP composites, 1
Finite element method
experimental and numerical study of the ironing of stainless steel cups, 95
Finite-element method
3D FEM simulation of multi-stage forging process using solid modeling of forging tools, 191
estimation of residual stresses in weldments using a nine-noded degenerated shell element, 150
Finite-element modeling
an adaptive mesh h-refinement algorithm for the finite-element modeling of sheet forming, 183
Flowchart of machining error
technological heredity in spur gear manufacturing, 66
Force/displacement
using neural networks to model the blanking process, 52
Fracture
using neural networks to model the blanking process, 52
Frequency domain
using neural networks to model the blanking process, 52
Fuzzy c-means
fuzzy c-means approach to color-image processing for evaluating the grid lines in plane extrusion, 12

GFRP
investigations into the effect of geometry of a trepanning tool on thrust and torque during drilling of GFRP composites, 1
Glass bead
effects of pressure and temperature on the melt density and the melt flow rate of LDEP and glass bead-filled LDPE composite, 167
Grinding mechanisms
helical scan grinding of brittle and ductile materials, 196

Hardness
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
effect of laser surface hardening on En18 (AISI 5135) steel, 29
Helical angle
surface generation mechanism in helical scan grinding: an analytical study, 206
Helical scan grinding
helical scan grinding of brittle and ductile materials, 196
surface generation mechanism in helical scan grinding: an analytical study, 206
Hydraulic forming
developments in hydroforming, 236
Hydrobulging
developments in hydroforming, 236
Hydroforming
developments in hydroforming, 236
Hydromechanical deep-drawing
developments in hydroforming, 236

Inconel alloy 690
application of a manufacturing model for the optimization of additive processing of Inconel alloy 690, 18
Induction heating
computer simulation of pipe-bending processes with small bending radius using local induction heating, 75

Integral hydrobulge forming
developments in hydroforming, 236
Ironing
experimental and numerical study of the ironing of stainless steel cups, 95

Laser
application of a manufacturing model for the optimization of additive processing of Inconel alloy 690, 18
Laser hardening
effect of laser surface hardening on En18 (AISI 5135) steel, 29
LDPE
effects of pressure and temperature on the melt density and the melt flow rate of LDEP and glass bead-filled LDPE composite, 167
Leadframes
theoretical analysis of springback in bending of integrated circuit leadframes, 111
Limit strains
a new theoretical model for predicting limit strains in the punch stretching of sheet metals, 257
Linearly converging dies
a numerical application of the upper-bound technique for round-to-hexagon extrusion through linearly converging dies, 105

Martensite
effect of laser surface hardening on En18 (AISI 5135) steel, 29
Material removal rate (MRR)
micro slit machining using electro-discharge machining with a modified rotary disk electrode (RDE), 161
Medium-carbon steel
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
Melt density
effects of pressure and temperature on the melt density and the melt flow rate of LDEP and glass bead-filled LDPE composite, 167
Metal flow
a simplified approach for the simulation of metal flow in a cylindrical sleeve diecasting cavity, 116
Metal matrix composite
the effect of cold rolling on the dynamic mechanical responses of SiCp/Al composites, 215
Metal powder
application of a manufacturing model for the optimization of additive processing of Inconel alloy 690, 18
Metal sheets
a new theoretical model for predicting limit strains in the punch stretching of sheet metals, 257
MFR
effects of pressure and temperature on the melt density and the melt flow rate of LDEP and glass bead-filled LDPE composite, 167
Micro electro-discharge machining (MEDM)
micro slit machining using electro-discharge machining with a modified rotary disk electrode (RDE), 161
Microhardness
micro-hardness of spot welded (B.S. 1050) commercial aluminium as correlated with welding variables and strength attributes, 43
the effect of niobium and homogenization on the wear resistance and some mechanical properties of ferritic stainless steel containing 17–18 wt.% chromium, 172
Microwave curing
study on the microwave curing of adhesive joints using a temperature-controlled feedback system, 128

Multi-stage forging
3D FEM simulation of multi-stage forging process using solid modeling of forging tools, 191

Neural network
in-process monitoring of grinding burn in the cylindrical grinding of steel, 37
Neural networks modelling
using neural networks to model the blanking process, 52
Newton–Raphson iteration method
simulation of the sheet metal extrusion process by the enhanced assumed strain finite element method, 250

One and two factorial correlational analysis of machining error
technological heredity in spur gear manufacturing, 66

Parametric programming
development of a parametric computer-aided die design system for cold forging, 80
Partial and integral effect of input machining errors
technological heredity in spur gear manufacturing, 66
Phase transformation
effect of laser surface hardening on En18 (AISI 5135) steel, 29
Pipe bending
computer simulation of pipe-bending processes with small bending radius using local induction heating, 75
Plane stress
theoretical analysis of springback in bending of integrated circuit leadframes, 111
Plastics blow molding
an adaptive mesh h-refinement algorithm for the finite-element modeling of sheet forming, 183
Plate
study on the deformation mode of conventional spinning of plates, 226
Poiseuille flow
modeling of air back pressure in die-casting dies, 264
Polarity
micro slit machining using electro-discharge machining with a modified rotary disk electrode (RDE), 161
Process planning
design for manufacturing: a dimensioning aspect, 121
Pulse current
a study of the effect of average preset voltage on hardness during electrolytic surface-hardening in aqueous solution, 245
Punch stretching
a new theoretical model for predicting limit strains in the punch stretching of sheet metals, 257

Residual stresses
estimation of residual stresses in weldments using a nine-noded degenerated shell element, 150
Rotating disk electrode (RDE)
micro slit machining using electro-discharge machining with a modified rotary disk electrode (RDE), 161

Shear spinning
study on the deformation mode of conventional spinning of plates, 226
Sheet forming
an adaptive mesh h-refinement algorithm for the finite-element modeling of sheet forming, 183
Sheet metal
developments in hydroforming, 236
Sheet metal forming
development of a damage-based criterion for ductile fracture prediction in sheet metal forming, 270

SiC
the effect of cold rolling on the dynamic mechanical responses of SiCp/Al composites, 215
SiC particles
cutting process and chip appearance of aluminum matrix composites reinforced by SiC particle, 231
Slab method
experimental and numerical study of the ironing of stainless steel cups, 95
Small bending radius
computer simulation of pipe-bending processes with small bending radius using local induction heating, 75
Soft-tool forming
developments in hydroforming, 236
Spark temperature
in-process monitoring of grinding burn in the cylindrical grinding of steel, 37
Spatial elementary rigid region technique
a numerical application of the upper-bound technique for round-to-hexagon extrusion through linearly converging dies, 105
Spot joints
micro-hardness of spot welded (B.S. 1050) commercial aluminium as correlated with welding variables and strength attributes, 43
Springback
theoretical analysis of springback in bending of integrated circuit leadframes, 111
Spur gear manufacturing
technological heredity in spur gear manufacturing, 66
Stainless steel
experimental and numerical study of the ironing of stainless steel cups, 95
Statistical experimental design
micro-hardness of spot welded (B.S. 1050) commercial aluminium as correlated with welding variables and strength attributes, 43
Steel 40Cr
technological heredity in spur gear manufacturing, 66
Strain field
simulation of the sheet metal extrusion process by the enhanced assumed strain finite element method, 250
Superplastic forming
an adaptive mesh h-refinement algorithm for the finite-element modeling of sheet forming, 183
Surface hardness
the effect of niobium and homogenization on the wear resistance and some mechanical properties of ferritic stainless steel containing 17–18 wt.% chromium, 172
Surface-roughness
surface generation mechanism in helical scan grinding: an analytical study, 206

Technological heredity
technological heredity in spur gear manufacturing, 66
Temperature-controlled feedback system
study on the microwave curing of adhesive joints using a temperature-controlled feedback system, 128
Thermal stability
study on the thermal stability of Cu–P based amorphous alloy systems, 90
Time domain
using neural networks to model the blanking process, 52
Tolerance charting
design for manufacturing: a dimensioning aspect, 121
Tool geometry
investigations into the effect of geometry of a trepanning tool on thrust and torque during drilling of GFRP composites, 1
Toughness
the effect of niobium and homogenization on the wear resistance and some mechanical properties of ferritic stainless steel containing 17–18 wt.% chromium, 172
Trepanning
investigations into the effect of geometry of a trepanning tool on thrust and torque during drilling of GFRP composites, 1
Tube
developments in hydroforming, 236

Upper bound analysis
a numerical application of the upper-bound technique for round-to-hexagon extrusion through linearly converging dies, 105

Vacuum forming
numerical simulation of acrylonitrile-butadiene-styrene material's vacuum forming process, 219
Velocity discontinuity
a numerical application of the upper-bound technique for round-to-hexagon extrusion through linearly converging dies, 105
Viscoplastic
numerical simulation of acrylonitrile-butadiene-styrene material's vacuum forming process, 219
Viscous pressure forming
developments in hydroforming, 236
Visioplasticity
fuzzy c-means approach to color-image processing for evaluating the grid lines in plane extrusion, 12

Wear resistance
the effect of niobium and homogenization on the wear resistance and some mechanical properties of ferritic stainless steel containing 17–18 wt.% chromium, 172
Welding parameters
micro-hardness of spot welded (B.S. 1050) commercial aluminium as correlated with welding variables and strength attributes, 43
Wheel life prediction
in-process monitoring of grinding burn in the cylindrical grinding of steel, 37
